

EE 422C Project 4 (Critters Part 2) Team Plan
Justin Nguyen (jhn545)
Rebecca Jiang (rsj498)
Fall 2016

We both met up to figure out how to set up a Git repo that worked with Eclipse. Justin designed and placed the buttons, labels, text fields, etc. on the User Interface, put in grid lines for the Critter World, implemented the look function, and wrote the error messages for each button. Rebecca changed the Critter subclasses, added the slider for animation, figured out how to make the buttons work, and attempted to implement animation. Justin then figured out how to use Timer and made the animation work successfully. We worked separately for some parts at the beginning but also met up and implemented different functionalities while helping each other.
